- Vista Pure system
- Invisalign invisible braces
- Zoom one-visit whitening
- Somnomed - Sleep apnea solution
- CEREC hi-tech restorations - no impression and delivery in same visit

Q: Are You Too Busy For Two Dental Visits?

A: Dental care is evolving and so can your experience. Proper dental care is critical to preserve and, when necessary, restore your unique smile. New technologies help dentists diagnose problems earlier, allowing dentists to treat problems sooner and with less invasive techniques. Like the way technology today is changing our everyday lives, it has provided the field of dentistry the opportunity to make dental visits more efficient, more convenient and more comfortable.

We recognize that many people do not see the dentist as their favorite past time, but we are aiming to change that mindset!

One breakthrough instrument, called CEREC®, allows dentists to quickly restore damaged teeth with natural-colored ceramic fillings. CEREC uses CAD/CAM (Computer Aided Design/Computer Aided Manufacturing) technology. It is comprised of a 3-D digital camera, a medical grade computer and milling machine all located on site. The camera takes an optical impression of the damaged tooth, then the doctor takes over using CAD technology to design the restoration. The CAM milling unit creates the restoration while the patient waits. Utilizing a special oven, color enhanced glazing can add a final touch to the esthetic restoration.

What does this mean for the patient? A tooth colored restoration means no more silver fillings that discolor the smile. The filling is natural looking, compatible with tissue in the mouth, anti abrasive, and plaque resistant. Dentists no longer need to create temporaries or take the cumbersome impression for lab processing. Because of this, the traditional second visit has been eliminated. The dentist can restore damaged teeth in a single appointment!

CEREC has two decades of clinical research and more than 20 million restorations performed worldwide documenting support of the technology. The restorations have been proven precise, safe and effective. This is a wonderful technology that's time has come. It is a patient focused innovation that we are happy to be among the first in Bucks County to offer to our patients. [BMCCCL](#)

Dr. Robert Lantzy is a comprehensive family dentist in Newtown, Bucks County. He and his caring staff of professionals provide a range of services in a state of the art facility where the focus is on individualized attention and lasting patient-doctor relationships. You may reach the office at (215) 860-5901 or by visiting www.buckscountydental.com.
